

Shure Stem Table Remediations Assessment

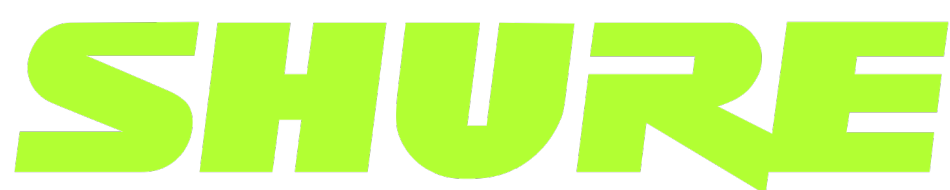

Product Security Evaluation Performed by Independent Experts

Praetorian reviewed the remediations in place for vulnerabilities that were discovered in the Stem Table firmware.

This document confirms the results of the recent security evaluation undertaken by Shure, Inc. and performed by Praetorian. Between the dates of May 24 and May 28, 2021, Praetorian reviewed the remediations implemented for the Stem Table 2.2.0.0 firmware.

Before the assessment, GRIMM identified 4 high-risk and 2 low-risk issues in the Stem Table. During the assessment, Praetorian analyzed the remediations put into place by Shure from May 24 to May 28, 2021. During the assessment, Praetorian determined that those vulnerabilities were remediated.

As the code base continues to change, so too will its overall security posture. Such changes will affect the validity of Praetorian's findings and this letter. Therefore, any statements made by Praetorian only describe a "snapshot" in time. Praetorian would like to thank Shure for this opportunity to help the organization evaluate its current security posture.
